

VODIČ O EKONOMIČNOSTI POTROŠNJE GORIVA I EMISIJAMA CO₂

NOVIH OSOBNIH VOZILA DOSTUPNIH ZA KUPOVINU
U REPUBLICI HRVATSKOJ U 2022. GODINI

Zagreb, 2022.

SADRŽAJ

1. UVOD	3
1.1. Potrošnja goriva	3
1.2. Klimatske promjene	4
1.3. Promet i klima	8
1.4. Vozila, njihove emisije ugljikova dioksida i ostalih štetnih plinova	10
1.5. Oznaka ekonomičnosti potrošnje goriva i emisija ugljikova dioksida	12
2. SAVJETI ZA ŠTEDNJU GORIVA	14
3. POPIS MODELA NOVIH OSOBNIH VOZILA DOSTUPNIH NA TRŽIŠTU U REPUBLICI HRVATSKOJ U 2022. GODINI, VRSTA NJIHOVA POGONA, POTROŠNJE GORIVA I EMISIJA UGLJIKOVA DIOKSIDA	16
3.1. Tablica modela novih osobnih vozila dostupnih na tržištu u Republici Hrvatskoj u 2022. godini (abecednim redom), vrsta njihova pogona, potrošnje goriva (l/100 km ili m ³ /100 km) i emisija ugljikova dioksida (g/km)	17
3.2. Popis deset modela novih osobnih vozila najekonomičnijih po potrošnji goriva i po vrijednostima specifičnih emisija CO ₂	223
3.3. Popis modela novih osobnih vozila po markama najekonomičnijih po potrošnji goriva i po vrijednostima specifičnih emisija CO ₂	225
4. IZVORI PODATAKA ZA VODIČ O EKONOMIČNOSTI POTROŠNJE GORIVA I EMISIJAMA UGLJIKOVA DIOKSIDA	234

1. UVOD

Na temelju Zakona o zaštiti okoliša ("Narodne novine", br. 80/13, 78/15, 12/18 i 118/18) i Pravilnika o dostupnosti podataka potrošačima o službenoj potrošnji goriva i službenim specifičnim emisijama CO₂ novih osobnih vozila ("Narodne novine", broj 113/21), ministarstvo nadležno za unutarnje poslove, početkom svake godine izrađuje i izdaje Vodič o ekonomičnosti potrošnje goriva i emisijama CO₂ novih osobnih vozila dostupnih za kupovinu u Republici Hrvatskoj, dok je ministarstvo nadležno za zaštitu okoliša i prirode odgovorno za provedbu i funkciranje programa informiranja potrošača o službenoj potrošnji goriva i službenim specifičnim emisijama CO₂ novih osobnih vozila i izradu uvodnog teksta.

U Vodiču se navode podaci o službeno utvrđenoj specifičnoj potrošnji goriva i specifičnim emisijama ugljikova dioksida (CO₂) svakog modela novih osobnih vozila dostupnih na hrvatskom tržištu.

Cilj Vodiča je kupcima osobnih automobila pružiti točne, službene podatke, koji će im pomoći u izboru vozila, planiranju budućih troškova za gorivo, ali i omogućiti aktivno sudjelovanje u zaštiti okoliša i smanjivanju stakleničkog efekta, odnosno klimatskih promjena, izborom vozila s manjim emisijama CO₂, koji je glavni staklenički plin, i drugih štetnih tvari.

Vodič sadrži i savjete vozačima za pravilno korištenje i redovito održavanje osobnih vozila te navodi vozačke navike koje smanjuju potrošnju goriva i emisije CO₂ (izbjegavanje agresivne vožnje, vožnja pri manjoj brzini, anticipirano kočenje, odgovarajući tlak u gumama, skraćivanje vremena rada motora u praznom hodu, izbjegavanje opterećivanja prekomjernim teretom). U Uvodu su ukratko objašnjeni učinci emisija stakleničkih plinova i doprinosa emisija stakleničkih plinova iz motornih vozila na klimatske promjene do kojih se došlo na temelju najnovijih znanstvenih spoznaja, upute potrošačima o mogućnosti odabira i korištenja različitih vrsta motornih goriva i zahtjevi zakonodavstva na razini Europske unije po pitanju smanjenja emisija CO₂ u podsektoru Prometa.

1.1. Potrošnja goriva

Smanjenje potrošnje goriva omogućuje znatnu uštedu novca tijekom vremena. Ako se smanji potrošnja goriva za samo jednu litru na sto prijeđenih kilometara i ako se godišnje u prosjeku prijeđe 15 tisuća kilometara, a uz pretpostavku da je prosječna cijena goriva devet kuna po litri, može se uštedjeti oko 1 350 kuna godišnje. Kod trenutnog velikog povećanja cijena goriva od navedenog, potreba smanjenja potrošnje goriva postaje to značajnija kako bi se obiteljski budžet tako tako održao u prihvatljivim okvirima.

Vrijednosti potrošnje goriva za sve modele osobnih vozila koji su dostupni na tržištu Republike Hrvatske navedene su u ovom Vodiču u tablicama 3.1., 3.2. i 3.3. od 18. stranice nadalje. Vrijednosti potrošnje goriva utvrđene su u skladu s ispitnim postupkom koji je jednak na cijelom području Europske unije.

1.2. Klimatske promjene

Klimatski sustav Zemlje određuju mnogi odnosi između Sunčeva zračenja i glavnih sastavnica klimatskog sustava - hidrosfere, kriosfere, atmosfere, litosfere i biosfere. Promjenom kemijskog sastava atmosfere kao i promjenom koncentracije pojedinih sastojaka atmosfere narušava se ravnoteža klimatskog sustava. Zemljina klima stalno se mijenja zbog različitih astronomskih i drugih fizikalnih i kemijskih čimbenika. Od početka industrijske revolucije sredinom 18. stoljeća, a posebno u posljednjih stotinu godina, došlo je do velikog povećanja broja stanovnika na Zemlji i pojačavanja ljudske aktivnosti. Izgaranje fosilnih goriva (u proizvodnji energije, prometu, poljoprivredi itd.) doprinosi povećanju koncentracije ugljikova dioksida i drugih plinova u atmosferi i tako utječe na jačanje stakleničkog efekta i globalno zagrijavanje.

Glavni pokazatelj klimatskih promjena je porast temperature Zemljine površine.

Glavni uzrok ovog globalnog zatopljenja je povećanje koncentracije stakleničkih plinova u Zemljinoj atmosferi. Prema Petom izvješću o procjeni - Promjena klime (IPCC Fifth Assessment Report - Climate Change, AR5, 2014.) Međuvladinog tijela za klimatske promjene (*Intergovernmental Panel on Climate Change*, IPCC), globalna temperatura će do kraja 21. stoljeća vjerojatno porasti između 0,3 i 4,8 °C. Povećanje razine stakleničkih plinova u atmosferi ključni je pokretač klimatskih promjena, a njihove atmosferske koncentracije odražavaju ravnotežu između emisija koje su posljedica čovjekova djelovanja, prirodnih izvora emisija i neto ponora u biosferu i oceane.

Preliminarno izvješće o stanju globalne klime u 2021. godini Svjetske meteorološke organizacije (WMO) (*State of the Global Climate 2021 - WMO Provisional Report*), donosi sljedeće podatke po globalnim klimatskim indikatorima.

a.) Prosječna globalna temperatura od siječnja do rujna 2021. godine bila je $1,08 \pm 0,13$ °C iznad razine temperatura u baznom predindustrijskom razdoblju od 1850. do 1900. godine. Kad se završe analize mjerjenja, 2021. godina će vjerojatno biti između pete i sedme najtoplje godine na globalnoj razini. Stoga će posljednjih sedam godina, od 2015. do 2021. godine, najvjerojatnije biti sedam najtopljih godina od početka sustavnih mjerjenja.

b.) U 2020. godini koncentracija stakleničkih plinova ponovo je dostigla nove rekorde i iznosila je: $413,2 \pm 0,2$ ppm CO₂, $1\,889 \pm 2$ ppb CH₄ i $333,2 \pm 0,1$ ppb N₂O, a to je 149 % CO₂, 262 % CH₄ i 123 % N₂O od koncentracija tih stakleničkih plinova u predindustrijskom razdoblju (1750. godine). Povećanje emisija CO₂ od 2019. do 2020. godine bilo je nešto manje od povećanja u razdoblju od 2018. do 2019. godine, ali je i dalje bilo više od prosječnog godišnjeg rasta u posljednjem desetljeću i to unatoč oko 5,6 % smanjenja CO₂ emisija iz fosilnih goriva u 2020. godini zbog restrikcija povezanih s pandemijom bolesti COVID-19. Podaci u stvarnom vremenu s određenih lokacija, uključujući lokalitet Mauna Loa (Havaji) i lokalitet Cape Grim (Tasmanija), ukazuju da su se razine CO₂, CH₄ i N₂O nastavile povećavati i u 2021. godini. Posebno zabrinjava daljnji porast koncentracije atmosferskog CH₄, jer on nije samo

snažan staklenički plin već kao prekursor troposfernog ozona ima utjecaja na ljudsko zdravlje, poljoprivrednu i općenito ekosustave.

c.) Globalna srednja razina mora (GMSL) u 2021. godini dostigla je novi rekord. Iako od 1993. godine razina mora raste gotovo svugdje, gledano po pojedinim regijama ona raste nejednoliko. Mjerenja od 1990.-tih pokazuju da je porast prosječne globalne srednje razine mora iznosio 2,1 mm/god u razdoblju od 1993. do 2002. godine, a čak 4,4 mm/god u razdoblju od 2013. do 2021. godine, što je dvostruko više nego u prethodnom razdoblju, a razlog tome je ubrzavanje topljenja kriosfere Zemlje. Grenland je sredinom kolovoza 2021. godine doživio izvanredno otapanje leda na temperaturama iznad 0 °C i pojavom kiše na najvišoj točki ledenog omotača. Ako se nastavi trenutni trend topljenja ledenog pokrivača, on će se početi podudarati s "najgorim" scenarijem Međuvladinog tijela za klimatske promjene (IPCC) od dodatnih 17 cm povišenja razine mora do 2100. godine. Projekcije IPCC-a pokazuju da bi porast razine mora mogao do kraja ovoga stoljeća dovesti 400 milijuna ljudi u obalnim područjima u opasnost od godišnjih poplava, uključujući i Republiku Hrvatsku.

d.) Zbog povećanja temperature morske vode dolazi do smanjenja količine otopljenog kisika u morskoj vodi (deoksidacija) pa se procjenjuje da je od sredine 20. stoljeća količina otopljenog kisika u morskoj vodi pala za 1 – 2 % ($2,4 - 4,8 \text{ Pmola}$ ili $77 \times 10^9 - 145 \times 10^9 \text{ tona}$) i to kako na pučini tako i u priobalju, uključujući estuarije i poluotvorena mora.

e.) Ocean iz atmosfere apsorbira oko 23 % godišnjih antropogenih emisija CO₂ te na taj način pomaže ublaženju utjecaja klimatskih promjena na Zemlji. Međutim, kao posljedica otapanja CO₂ u morskoj vodi, dolazi do snižavanja njene pH vrijednosti što se označava kao acidifikacija (zakiseljavanje) oceana. Acidifikacija oceana utječe na mnoge organizme, biološke procese i usluge ekosustava, ugrožavajući sigurnost izvora hrane ugrožavanjem ribarstva i akvakulture. Kako se acidifikacija oceana povećava, sposobnost oceana da apsorbira nove količine CO₂ iz atmosfere se smanjuje i tako znatno otežava ulogu oceana u ublaženju klimatskih promjena.

f.) Većinu dodatne energije koja se akumulira u Zemljinom sustavu zbog povećanja koncentracije stakleničkih plinova preuzimaju oceani. Ta dodatna energija zagrijava oceane zbog čega dolazi toplinske ekspanzije vode što, pored topljenja kriosfere, također dovodi do povišenja razine mora.

Prema izvješću IPCC SR15 potrebno je ograničiti rast globalne temperature do najviše 1,5 °C iznad razine u predindustrijskom razdoblju kako bi se oko 2050. godine postigle neto nula emisije CO₂, što je jedan od ciljeva Pariskog sporazuma. Klimatska neutralnost u 2050. godini označava ravnotežu između antropogenih emisija CO₂ i prirodnih spremnika koji upijaju CO₂ (šume, pašnjaci i dr.). To znači da bi različitim mjerama trebalo emisije iz svih sektora približiti nuli, dok bi preostale emisije koje će još uvijek postojati u nekim sektorima (poljoprivreda, promet) trebalo kompenzirati mjerama za povećanje prirodnih spremnika koji upijaju CO₂ ili tehnološkim postupcima kao što je hvatanje i korištenje ugljika (*Carbon Capture and Utilization*, CCU) i hvatanje i skladištenje ugljika (*Carbon Capture and Storage*, CCS).

Klimatske promjene imati će sve snažnije negativne učinke, barem u idućih pet desetljeća, što naglašava potrebu za ulaganjem u ublažavanje i prilagodbu klimatskim promjenama. U tom kontekstu osobito značenje ima ispunjavanje obaveza prema Pariškom sporazumu i dostizanje više razine ambicije u smanjenju emisija.

Republika Hrvatska je stranka Okvirne konvencije Ujedinjenih naroda o promjeni klime (*United Nations Framework Convention on Climate Change*, UNFCCC) i Kyotskog protokola i imala je obvezu smanjenja emisija stakleničkih plinova za 5 % u razdoblju od 2008. do 2012. godine u odnosu na razinu emisija u baznoj 1990. godini, što je i ostvarila. Pariškim sporazumom, usvojenim u Parizu 12. prosinca 2015. godine, dugoročno su određene obveze smanjenja/ograničenja emisija nakon 2020. godine. Pariški sporazum je globalni sporazum i pravno obvezujući za sve države svijeta, uključujući i Republiku Hrvatsku, koja ga je ratificirala 2017. godine (Zakon o potvrđivanju Pariškog sporazuma, "Narodne novine", Međunarodni ugovori, broj 3/17).

Republika Hrvatska će do 2030. godine primjenjivati okvir klimatske i energetske politike Europske unije do 2030. godine. Taj klimatsko-energetski paket Europske unije uključuje EU sustav trgovanja emisijama (*Emissions Trading System*, EU ETS), ciljeve za obnovljive izvore energije i energetsku učinkovitost. Republika Hrvatska je do 2030. godine dobila i godišnje emisijske kvote (*Annual Emission Allocations*, AEA) iz sektora izvan EU sustava trgovanja emisijama stakleničkih plinova koji uključuje sektore poljoprivrede, prometa, gospodarenja otpadom itd. i te kvote se ne smiju prekoračiti. Ukoliko godišnje emisije stakleničkih plinova neke države članice Europske unije (pa tako i Republike Hrvatske) premaže vrijednost dodijeljene godišnje emisijske kvote stakleničkih plinova, ona na tržištu emisijskim jedinicama mora kupiti AEA jedinice u onoj količini koliko su joj emisije premašile dodijeljenu godišnju emisijsku kvotu. Godišnje emisije stakleničkih plinova Republike Hrvatske su do sada uvijek bile ispod dodijeljene emisijske kvote. To znači da u razdoblju od 2021. do 2030. godine, Republika Hrvatska mora smanjiti svoje emisije stakleničkih plinova iz sektora izvan EU sustava trgovanja emisijama stakleničkih plinova za 7 % u odnosu na njene emisije u 2005. godini.

Uredbom o obvezujućem godišnjem smanjenju emisija stakleničkih plinova u državama članicama od 2021. do 2030. godine i Uredbom o uključivanju emisija i uklanjanja stakleničkih plinova iz sektora Korištenja zemljišta, prenamjene zemljišta i šumarstva (LULUCF) u okvir za klimatsku i energetsku politiku do 2030. godine, pridonosi se mjerama u području klime za ispunjenje obveza u okviru Pariškog sporazuma. Prema LULUCF-uredbi svaka država članica pa tako i Republika Hrvatska, mora osigurati takve uvjete da od 2021. do 2030. godine emisije stakleničkih plinova u sektor Korištenja zemljišta, prenamjene zemljišta i šumarstva ne premašuju njihova uklanjanja.

Premjeri država članica usvojili su u prosincu 2019. godine cilj postizanja klimatske neutralnosti u Europskoj uniji do 2050. godine. Kako bi se uspio postići taj zadani cilj, u prosincu 2020. godine usvojen je novi, povećani cilj smanjenja emisija u Europskoj uniji od 55 % do 2030. godine. U skladu s tim ciljem, 2021. godine započelo se s prilagođavanjem cijelog zakonodavstva Europske unije (zakonodavni paket pod nazivom "Spremni za 55 %",

engl. "Fit for 55"), što će na kraju rezultirati obavezom povećanja smanjenja emisija stakleničkih plinova u svim sektorima, uključujući i podsektor Prometa. Prema prijedlogu izmjene Uredbe o obvezujućem godišnjem smanjenju emisija stakleničkih plinova u državama članicama od 2021. do 2030. godine cilj smanjenja emisija stakleničkih plinova u Republici Hrvatskoj iz sektora izvan EU sustava trgovanja emisijama stakleničkih plinova trebao bi se povećati sa 7 % na 16,7 %. Ovaj ambiciozniji cilj zahtijevat će ulaganje dodatnih napora u provođenje niza mjera za smanjenje emisija i u podsektoru Prometa.

Zbog sveobuhvatnosti djelovanja klimatskih promjena Republika Hrvatska je ranjiva na klimatske promjene kao i sve druge zemlje svijeta i ima interes djelatno pridonositi globalnim naporima za prilagodbu klimatskim promjenama i ublažavanje klimatskih promjena. Glavni cilj je smanjivanje emisija stakleničkih plinova bez ugrožavanja gospodarskoga razvoja, konkurentnosti tvrtki, individualnoga standarda i zaposlenosti.

Republika Hrvatska kao punopravna članica Europske unije izravno primjenjuje propise Europske unije povezane s klimatskim promjenama i energetikom, provodeći mjere za njihovu primjenu, a među kojima posebno važno mjesto zauzima izrada i aktivno provođenje dugoročnih strategija. Stoga je Ministarstvo gospodarstva i održivog razvoja izradilo Strategiju niskougljičnog razvoja Republike Hrvatske do 2030. s pogledom na 2050. godinu¹ (NUS) ("Narodne novine", broj 63/2021) kojom se određuje put Republike Hrvatske prema konkurentnom gospodarstvu s niskom emisijom stakleničkih plinova, a koja je usvojena 2021. godine. Ovaj dokument sveobuhvatna je gospodarska, razvojna i okolišna strategija koja obuhvaća inovacije, transfer naprednih tehnologija, značajne strukturne promjene i mjere u svim sektorima, uključujući i podsektor Prometa. Kako Strategija niskougljičnog razvoja utječe na sve gospodarske grane, usklađena je s novom Strategijom energetskog razvoja Republike Hrvatske do 2030. s pogledom na 2050. godinu ("Narodne novine", broj 25/2020²) i s Integriranim nacionalnim energetskim i klimatskim planom za Republiku Hrvatsku za razdoblje od 2021. do 2030. godine³.

Glavni izvori stakleničkih plinova su: izgaranje fosilnih goriva, industrijski procesi, odlaganje otpada, poljoprivredna proizvodnja i stočarstvo, dok sječa šuma ima višestruki utjecaj na povećanje koncentracije stakleničkih plinova. Naime, izgaranje drva izvor je emisija stakleničkih plinova u atmosferu, a pri tome se istodobno smanjuje kapacitet najmoćnijeg prirodnog mehanizma za uklanjanje CO₂ iz atmosfere - fotosinteze zelenih autotrofnih organizama.

Glavni staklenički plin proizведен djelovanjem čovjeka je ugljikov dioksid. Kao i u većini zemalja najznačajniji antropogeni izvori emisija ugljikova dioksida u Republici

¹ Strategija niskougljičnog razvoja Republike Hrvatske do 2030. s pogledom na 2050. godinu ("Narodne novine", broj 63/2021) (https://narodne-novine.nn.hr/clanci/sluzbeni/2021_06_63_1205.html)

² Strategija energetskog razvoja Republike Hrvatske do 2030. s pogledom na 2050. godinu ("Narodne novine", broj 25/2022) (https://narodne-novine.nn.hr/clanci/sluzbeni/2020_03_25_602.html)

³ Integrirani nacionalni energetski i klimatski plan za Republiku Hrvatsku

(https://mingor.gov.hr/UserDocsImages/UPRAVA%20ZA%20ENERGETIKU/Strategije,%20planovi%20i%20programi/hr%20necp/Integrirani%20nacionalni%20energetski%20i%20klimatski%20plan%20Republike%20Hrvatske%20%20_final.pdf)

Hrvatskoj su: procesi izgaranja fosilnih goriva u prometu i za potrebe proizvodnje električne energije i/ili topline te industrijski procesi.

Prema Izvješću o inventaru emisija stakleničkih plinova (NIR 2022) ukupne emisije svih stakleničkih plinova (ugljikov dioksid (CO_2), metan (CH_4), didušikov monoksid (N_2O), HFC (fluorougljikovodici), perfluorirani spojevi (PFC), sumporov heksafluorid (SF_6), dušikov trifluorid (NF_3)) 2020. godine u Republici Hrvatskoj iznosile su 23 758,40 kt CO_2eq (ne uključujući emisije i ponore u sektoru LULUCF), što je za 866,35 kt CO_2eq manje nego 2019. godine.

Među plinovima najveći doprinos emisijama stakleničkih plinova 2020. godine (ne uključujući sektor LULUCF) imale su emisije CO_2 sa 71,0 % (a potom emisije CH_4 sa 14,9 %, N_2O sa 7,0 % te emisije HFC-a, PFC-a i SF_6 sa 7,1 %).

Najveći doprinos ukupnim emisijama stakleničkih plinova u 2020. godini (ne uključujući sektor LULUCF) bio je iz sektora Energetike i iznosio je 65,3 % (unutar kojeg se nalazi i podsektor Prometa). Slijede emisije iz sektora Industrijskih procesa i uporabe proizvoda s 15,9 %, Poljoprivrede sa 11,3 % i Otpada sa 7,5 %.

Sektor Energetike je glavni uzrok antropogenih emisija stakleničkih plinova, to jest ima najveći doprinos emisijama stakleničkih plinova u Republici Hrvatskoj, koje su u 2020. godini bile za 5,9 % niže od emisija iz tog sektora u 2019. godini i za 27,6 % niže u usporedbi s emisijama iz tog sektora u 1990. godini. U ovom sektoru najveći dio emisija nastaje upravo kao posljedica izgaranja fosilnih goriva u prometu, koje su u 2020. godini iznosile 37,4 % ukupnih emisija iz sektora Energetike. Napominjemo da se Izvješće o Inventaru emisija stakleničkih plinova (NIR), koji je glavni izvor podataka o emisijama stakleničkih plinova u Republici Hrvatskoj (i kao takav predaje se Tajništvu UNFCCC-a do 15. travnja i Europskoj komisiji do 15. ožujka svake godine), izrađuje svake godine za dvije godine unatrag pa su tako u trenutno dostupnom NIR-u 2022 podaci za 2020. godinu).

Mjere za smanjenje emisija stakleničkih plinova su: korištenje obnovljivih izvora energije, povećanje energetske učinkovitosti, promjena tehnologija u industriji, izbjegavanje i odvojeno prikupljanje otpada kao i energetsko korištenje otpada, energetski učinkovita izolacija zgrada, korištenje javnog prijevoza i prijevoznih sredstava koja troše manje goriva i posumljavanje.

1.3. Promet i klima

Razvijen i djelotvoran promet robe i putnika uvjet je za uspješan gospodarski razvoj suvremenog društva. Promet je istodobno bitna gospodarska grana koja pridonosi turizmu, gospodarskom rastu, zapošljavanju, jačanju konkurentnosti i stvaranju dobiti. Međutim, pozitivne učinke prometa nužno je promatrati i u odnosu na činjenicu da je on istodobno i izvor niza problema kao što su: onečišćenje zraka, buka, prometne nesreće, prometna zagušenja, visoke emisije CO_2 i drugih štetnih tvari te gubitak kontinuiteta biotopa.

Promet je veliki izvor emisija CO₂, ali i drugih stakleničkih plinova kao što su CH₄ i N₂O. Promet uključuje emisije iz cestovnog, zračnog, željezničkog, pomorskog i riječnog prometa.

Cestovni promet uključuje sve tipove osobnih automobila, lakih gospodarskih vozila, teških gospodarskih vozila, autobusa, mopeda i motocikala. Ovi pokretni izvori emisija koriste različite vrste tekućih i plinovitih goriva, uglavnom benzin i dizel, te emitiraju značajne količine stakleničkih plinova i onečišćivača zraka. Prema podacima iz NIR-a 2022, od 1992. do 2007. godine emisije stakleničkih plinova iz cestovnog prometa u Republici Hrvatskoj su kontinuirano rasle, u razdoblju od 2008. do 2014. godine, emisije iz cestovnog prometa bile su neznatno smanjene zbog manje potrošnje goriva uzrokovanog ekonomskom krizom u Republici Hrvatskoj, kao i provedbe mjera za smanjenje emisija CO₂. Od 2015. godine emisije iz cestovnog prometa su opet rasle do 2019. godine. 2020. godine ukupne emisije stakleničkih plinova iz cestovnog prometa su bile za 11,94 % niže nego 2019. godine. Najveći udio emisija CO₂ iz podsektora Prometa 2020. godine bio je upravo iz cestovnog prometa (96.8 %), a potom iz pomorskog i riječnog prometa, te zračnog i željezničkog prometa.

Mjere za smanjenje emisija stakleničkih plinova u prometu su:

- propisivanje graničnih vrijednosti sastavnica i značajki kvalitete tekućih naftnih goriva;
- informiranje potrošača o ekonomičnosti potrošnje goriva i emisijama CO₂ novih osobnih vozila;
- poticanje potencijalnih kupaca da prilikom kupovine vozila vode računa i o tome koliko vozila troše goriva i kolike su im emisije stakleničkih plinova;
- provedba pilot projekata i uspostava sustava izobrazbe vozača cestovnih vozila za ekološku vožnju;
- korištenje alternativnih goriva koja nisu fosilna u prijevozu;
- financijski poticaji za kupnju hibridnih i električnih vozila;
- razvoj infrastrukture za električna vozila;
- razvoj održivih prometnih sustava u urbanim područjima.

Osim mjera za smanjenje emisija iz vozila, učinkovite su i mjere kojima se cestovni promet zamjenjuje drugim oblicima prijevoza.

U 2021. godini registrirano je 2 331 034 motorna vozila, od čega su 77,0% (1 795 465) osobna vozila, 3,2% mopedi i 3,7% motocikli.

U 2021. godini registrirano je 2 977 osobnih vozila, 1 458 mopeda, 464 motocikla i 255 teretnih vozila na električni pogon, odnosno 14 064 osobna vozila, jedan moped, jedan motocikl i 29 teretnih vozila na hibridni pogon. U odnosu na 2020. godinu to je povećanje ukupnog broja vozila na električni i hibridni pogon od 84,1%.

1.4. Vozila, njihove emisije CO₂ i ostalih štetnih plinova

Motori s unutarnjim izgaranjem emitiraju različite štetne tvari: dušikove okside (NO_x), hlapive organske spojeve (HOS), sumporove okside (SO_x), ugljikov monoksid (CO), stakleničke plinove, sitne čestice (PM₁₀, PM_{2,5}), teške metale, benzen i druge štetne tvari. Emisije su primarno ovisne o tehnologiji vozila/motora i svojstvima goriva.

Prema Europskoj agenciji za okoliš (*European Environment Agency*, EEA) emisije iz podsektora Prometa u Europskoj uniji ne smanjuju se dovoljno kako bi se ograničio njihov utjecaj na okoliš i klimu. Promet ostaje značajan izvor onečišćenja zraka, posebno česticama (PM) i dušikovim dioksidom, iako su se, zahvaljujući poduzetim mjerama, te emisije u posljednjem desetljeću smanjile. Promet je i glavni izvor okolišne buke u Europskoj uniji.

Na razini Europske unije, a prema podacima Europske agencije za okoliš, od 2007. do 2013. godine emisije iz prometa su se svake godine smanjivale. Međutim, otad su emisije stakleničkih plinova iz prometa (uključujući međunarodno zrakoplovstvo, ali bez pomorskog prometa) u porastu. Tako su u razdoblju od 2018. do 2019. godine emisije iz prometa u Europskoj uniji porasle za 0,8 %, a prema preliminarnim procjenama one su u 2020. godini pale za 12,7 % zbog velikog smanjenja prometnih aktivnosti zbog pandemije bolesti COVID-19. Emisije se povećavaju unatoč poboljšanju učinkovitosti vozila. To povećanje je u skladu s povećanjem razine gospodarske aktivnosti (mjereno bruto domaćim proizvodom) i povećanjem potražnje za prijevozom putnika i tereta. U podsektoru Prometa nije zabilježen isti postupni pad emisija kao u ostalim sektorima. Naime, emisije iz prometa su se počele smanjivati tek u 2007. godini i dalje su veće nego u baznoj 1990. godini. Unutar ovog podsektora, daleko najveće emisije u Europskoj uniji upravo su iz cestovnog prometa.

Laka gospodarska vozila i osobni automobili najveći su izvor emisija stakleničkih plinova iz prometa u Europskoj uniji. Europska unija je uspostavila sveobuhvatni pravni okvir za smanjenje emisija CO₂ iz lakih gospodarskih vozila i osobnih automobila kao dio napora za osiguranje smanjenja emisija stakleničkih plinova prema Pariškom sporazumu. Zakonodavni okvir Europske unije postavio je obvezujuće ciljeve smanjenja emisija CO₂ za laka gospodarska vozila i osobne automobile. Međutim, 2021. godine Europska unija je pristupila utvrđivanju novih viših standarda emisija CO₂ novih osobnih automobila i lakih gospodarskih vozila u skladu s povećanjem cilja smanjenja ukupnih emisija u Europskoj uniji za 55 %, a o kojima se još vodi rasprava. Predviđa se kako će se prosječne emisije iz prometa svake godine smanjivati kako će industrija vozila provoditi mjere u svrhu postizanja tih ciljeva.

Radi korištenja boljih načina određivanja razine emisija onečišćivača i CO₂ iz vozila te potrošnje goriva, Europska unija je postupno od 2017. do 2020. godine promijenila ispitni regulatorni postupak za vozila tako što je s NEDC sustava testiranja vozila (*New European Driving Cycle*) prešla na WLTP sustav testiranja vozila (*Worldwide harmonized light vehicles test procedures*). WLTP ispitni postupak je stroži i precizniji sustav testiranja vozila od NEDC ispitnog postupka, te daje realističnije vrijednosti emisija CO₂ i potrošnje goriva vozila. Od 1. siječnja 2019. godine države članice Europske unije trebaju za izvješćivanje potrošača upotrebljavati samo vrijednosti potrošnje goriva i emisija CO₂ prema WLTP ispitnom

postupku. Korelirane NEDC vrijednosti su korištene do kraja 2020. godine. Kako su WLTP ispitnim postupkom uvedeni stroži ispitni uvjeti i dobivaju se realnije vrijednosti specifične potrošnje goriva i specifičnih emisija CO₂, koji bolje odgovaraju suvremenim uvjetima vožnje i tehnologijama u vozilima, ovako dobivene vrijednosti potrošnje goriva i emisija CO₂ su u projektu za sve modele i tipove vozila više od onih dobivenih prijašnjim NEDC sustavom testiranja vozila.

Europska strategija za mobilnosti s niskom razinom emisije⁴ ima za cilj poboljšanje kvalitete zraka, smanjenje razine buke, smanjenje razina prometnih zagušenja i poboljšanje sigurnosti prometa, a kroz korištenje automobila koji troše manje energije, uspostavu bolje infrastrukture za alternativna goriva, uspostavu boljih veza između načina prijevoza te veće sigurnosti i manje zastoja zahvaljujući uvođenju digitalnih tehnologija. Prioritetna područja djelovanja u okviru ove strategije su:

a.) povećanje učinkovitost prometnog sustava na najbolji mogući način pomoću digitalnih tehnologija, utvrđivanja cijena prilagođavanjem potrošnji (*smart pricing*) i dalnjim poticanjem prelaska na načine transporta s nižim emisijama,

b.) ubrzanje razvoja alternativnih oblika energije s niskim emisijama prilagođenih potrebama transporta, poput naprednih biogoriva, električne energije, vodika i obnovljivih sintetičkih goriva te uklanjanjem prepreka za elektrifikaciju prometa i

c.) prelazak na korištenje vozila s nultom emisijom (iako će biti potrebna daljnja poboljšanja motora s unutarnjim izgaranjem, Europska unija treba ubrzati prijelaz na korištenje vozila s niskim i nultim emisijama).

Gradovi i lokalne vlasti igrat će ključnu ulogu u ostvarivanju ove strategije i oni već provode poticaje za alternativnu energiju i vozila s niskim emisijama, potiču aktivne oblike putovanja (biciklizam i pješačenje), javni prijevoz te sheme zajedničkog korištenja automobila radi smanjenja zagušenja i onečišćenja.

Na poticaj Ministarstva gospodarstva i održivog razvoja od 2014. godine na snazi je sustav kojim se obračun plaćanja posebne naknade za okoliš na vozila na motorni pogon provodi s obzirom na emisije CO₂ i onečišćujućih tvari u zrak iz motornih vozila. Sustav se vodi prema načelu „onečišćivač plaća“ u kojem su naknade za vozila s većim emisijama veće, a naknade za kategorije vozila sa smanjenim emisijama manje, čime se kupci motiviraju i usmjeravaju na donošenje odluke o kupnji učinkovitijih novih vozila s manjim emisijama CO₂.

Od početka 2017. godine u Republici Hrvatskoj su dobavljači tekućih naftnih goriva i energije u trenutku uvoza, unosa i proizvodnje goriva ili energije stavljenih na hrvatsko tržište obveznici smanjenja i praćenja emisija stakleničkih plinova u životnom vijeku goriva i energije namijenjene za cestovni promet i promet unutarnjim plovnim putovima. Od 2021. godine na snazi je Pravilnik o načinu praćenja i izvješćivanja te metodologiji izračuna emisija stakleničkih plinova u životnom vijeku isporučenih goriva i energije i načinu provođenja projekata smanjenja emisija nastalih istraživanjem i proizvodnjom nafte i plina ("Narodne novine", broj 131/21).

⁴ Europska strategija za mobilnosti s niskom razinom emisije

(<https://eur-lex.europa.eu/legal-content/HR/TXT/HTML/?uri=CELEX:52016DC0501&from=LV>)

Kako bi mjere za smanjenje emisija stakleničkih plinova bile učinkovite, potrebno je potencijalne kupce novih vozila potanko obavješćivati. Zbog toga već od 1999. godine u Europskoj uniji postoji obveza označavanja ekonomičnosti potrošnje vozila i emisija CO₂ iz novih osobnih automobila u skladu s Direktivom 1999/94/EZ o dostupnosti podataka za potrošače o ekonomičnosti potrošnje goriva i emisijama CO₂ u vezi s prodajom novih osobnih automobila. U Republici Hrvatskoj je 2021. godine donesen novi Pravilnik o dostupnosti podataka potrošačima o službenoj potrošnji goriva i službenim specifičnim emisijama CO₂ novih osobnih vozila ("Narodne novine", broj 113/21) prema kojem svaki dobavljač novih osobnih vozila namijenjenih prodaji u Republici Hrvatskoj na svakom prodajnom mjestu, uključujući promidžbene sajmove i elektroničke medije mora osigurati podatke o službenoj potrošnji goriva i službenim specifičnim emisijama CO₂ novih osobnih automobila.

Kako bi se potrošači informirali o ograničenoj mogućnosti uspoređivanja podataka iz prijašnjih vodiča (u kojima su navedeni podaci dobiveni NEDC ispitnim postupkom) s novim Vodičem za 2021. godinu (u kojem su navedeni podaci dobiveni WLTP ispitnim postupkom), a iz razloga što su rezultati testiranja WLTP postupkom obično viši, jer su ispitni uvjeti ovog novog ispitnog postupka stroži i dobivaju se realnije vrijednosti specifične potrošnje goriva i specifičnih emisija CO₂, Europska komisija je donijela Preporuke 2017/948 o primjeni vrijednosti potrošnje goriva i emisiji CO₂ homologiranih i izmjerena prema Globalno usklađenom ispitnom postupku za laka vozila kad se potrošače informira na temelju Direktive 1999/94/EZ ("Službeni list Europske unije", br. 142/100 od 2. lipnja 2017.).

1.5. Oznaka ekonomičnosti potrošnje goriva i emisija CO₂

Dobavljač je dužan za svaki model novog osobnog vozila, koji stavlja na hrvatsko tržište radi prodaje ili davanja u leasing, izraditi oznaku ekonomičnosti potrošnje goriva i specifičnih emisija CO₂.

Oznaka ekonomičnosti potrošnje goriva i emisija CO₂ sadrži:

- model osobnog vozila: marku, tip, varijantu ili izvedbu modela i vrstu goriva osobnog vozila na koje se odnosi;
- brojčanu vrijednost službene potrošnje goriva izraženu u litrama na 100 kilometara (l/100 km) ili u m³ na 100 kilometara (m³/100 km) ili u kWh na 100 km (kWh/100 km) zaokruženu na jedno decimalno mjesto;
- brojčanu vrijednost službenih specifičnih emisija CO₂ izraženih u gramima po kilometru (g/km) zaokruženu na najbliži cijeli broj;
- tekst koji glasi:

"Vodič o ekonomičnosti potrošnje goriva i emisijama CO₂ koji sadrži podatke za sve modele novih osobnih vozila dostupan je bez naknade na svim prodajnim mjestima i na mrežnim stranicama Ministarstva unutarnjih poslova."

- tekst koji glasi:

"Pored učinkovitosti korištenja goriva vozila, način vožnje i drugi čimbenici netehničke prirode utječu na potrošnju goriva i emisije CO₂ osobnih vozila. CO₂ je glavni staklenički plin odgovoran za globalno zatopljenje."

Oznaku ekonomičnosti potrošnje goriva i emisija CO₂ prodavač osobnog vozila je dužan vidljivo istaknuti na prodajnom mjestu na svaki model, odnosno u neposrednoj blizini svakog modela novog osobnog vozila koji je izložen radi prodaje ili davanja u leasing.

Oznaka ekonomičnosti potrošnje goriva i specifičnih emisija CO₂ mora biti izrađena u veličini 297 mm x 210 mm (A4) na podlozi bijele boje. Tekstualni dio mora biti jasan, pregledan i crne boje.

Vodič o ekonomičnosti potrošnje goriva i emisijama CO₂ dostupan je i na internetskim stranicama Ministarstva unutarnjih poslova.

2. SAVJETI ZA ŠTEDNJU GORIVA

► Izbjegavajte agresivnu vožnju

Agresivna vožnja uključuje nagla ubrzanja i intenzivno kočenje. Želite li vozilo što prije ubrzati do željene brzine, za to ćete morati uložiti više energije. Kada ćete vozilo htjeti usporiti ili zaustaviti, uloženu energiju kočenjem ćete morati pretvoriti u toplinu i izbaciti je u okoliš.

► U uvjetima gradske vožnje izbjegavajte pretjecanje

Vozite li u gradskoj gužvi, pretjecanjem vozila ispred vašeg vozila ionako ćete se naći iza nekog drugog vozila. Dolaskom na cilj, spoznat ćete kako je ušteda na vremenu zanemariva.

► Kad je moguće, ubacite u višu brzinu

Za svaki okretaj motor mora dobiti određenu količinu goriva. Što se motor brže okreće, češće dobiva gorivo. Stoga u vožnji, kako ne biste postizali preveliku brzinu vrtnje motora, nastojte voziti u što višoj brzini mjenjača koju dopušta vučna sposobnost motora.

► Ako je vaše vozilo njime opremljeno, poštujte indikator promjene stupnja mjenjača

Osobna vozila tipno odobrena nakon 1. studenoga 2012. godine moraju biti opremljena indikatorom promjene stupnja mjenjača. Indikator promjene stupnja mjenjača vizualnim putem upozorava vozača kad treba ubaciti u višu brzinu, kako bi se smanjila ukupna potrošnja goriva vozila.

► U gradskim uvjetima vožnje vozilo rashlađujte sruštenim prozorima, a na otvorenoj cesti koristite klimatizacijski uređaj

Pri većim brzinama srušeni prozori pogoršavaju aerodinamička svojstva vozila, a za pogon klimatizacijskog uređaja koristi se dio snage motora neovisno o brzini vozila. Zato je uputno da pri manjim brzinama, na primjer u gradskoj vožnji, unutrašnjost vozila rashlađujete srušanjem prozora, a pri vožnji na otvorenoj cesti prozore držite zatvorenima i koristite klimatizacijski uređaj. Klimatizacijski uređaj ne koristite kad je to nepotrebno, na primjer ako je jednaka ili slična temperatura zraka u vozilu i izvan vozila.

► Provjeravajte tlak u gumama vozila

Gume se tijekom vožnje stalno deformiraju, a za tu deformaciju potrebno je potrošiti energiju. Što je tlak guma bliže tlaku koji preporuča proizvođač vozila, gume će se manje deformirati i kao posljedica toga manje će se energije trošiti na njihovo deformiranje. Prenizak tlak guma nepovoljno utječe zbog jačeg trošenja guma i veće potrošnje goriva.

► Predviđajte promet nekoliko koraka unaprijed

Ako već izdaleka uočite da nailazite na crveno svjetlo na semaforu, oštar zavoj ili neku situaciju koja ne zahtijeva naglo kočenje, otpustite papučicu gasa i koliko je moguće, prije uporabe kočnica, pustite da motor usporava vozilo.

► **Ako je vaše vozilo njime opremljeno, na otvorenoj cesti koristite tempomat**

Održavanjem ustaljene brzine troši se najmanje goriva. Tempomat svojim regulacijskim sustavima održava ugođenu brzinu vozila na najbolji način.

► **Izbjegavajte prometne gužve**

U prometnim gužvama troši se puno goriva, jer se tada od vozila traži više kretanja iz mirovanja, ubrzavanja, kočenja i rada motora u praznom hodu. Takav način vožnje povećava potrošnju goriva, jer se za svako ubrzanje potroši puno energije. Ako je ikako moguće, izbjegavajte vožnju u onim vremenima kada su gužve najveće. Ako baš morate putovati u vrijeme najvećih gužvi, pokušajte isplanirati put cestama koje su manje opterećene vozilima.

► **Ne opterećujte vozilo nepotrebno**

Svaka masa kojom se vozilo dodatno opterećuje zahtijeva više goriva za njezino ubrzavanje i vožnju. Ispraznite prtljažni i putnički prostor od nepotrebnih stvari. Krovni nosači i kutije, osim što su dodatna masa, nepovoljno utječu na aerodinamičnost vozila pa to znatno povećava potrošnju goriva na brzinama većim od 90 km/h. Ako vam stvarno nisu potrebni, skinite krovne nosače i kutije.

► **Održavajte svoje vozilo na odgovarajući način**

Prljavi filtri za zrak i gorivo, korištenje motornog ulja neodgovarajuće gradacije, neispravne brizgaljke goriva, neugoden rasplinjač, razlozi neprolaženja ekotesta na tehničkom pregledu itd., osim što skraćuju životni vijek motora, povećavaju i potrošnju goriva. Vodite brigu o redovitim servisima svoga vozila.

3. POPIS MODELA NOVIH OSOBNIH VOZILA DOSTUPNIH NA TRŽIŠTU U REPUBLICI HRVATSKOJ U 2022. GODINI, VRSTA NJIHOVA POGONA, POTROŠNJE GORIVA I EMISIJA UGLJIKOVA DIOKSIDA

Kratice vrsta goriva korištene u tablici

B – benzin

BE – bioetanol

BG – biogorivo

CNG – komprimirani prirodni plin*

D – dizel

E – električni pogon

H – hibridni pogon

LPG – ukapljeni naftni plin*

V – vodik

* Za vozila opremljena pogonom na ukapljeni naftni plin ili komprimirani prirodni plin potrošnja goriva se u tablicama izražava u m³/100km

3.1. Tablica potrošnje goriva i emisija ugljikova dioksida modela novih osobnih vozila dostupnih na tržištu u Republici Hrvatskoj u 2021. godini (abecednim redom), vrsta njihova pogona, potrošnje goriva (l/100 km ili m³/100 km ili kWh/100 km) i specifičnih emisije ugljikova dioksida (g/km)

NAPOMENA:

Od 1. rujna 2017. godine nova se vozila homologiraju primjenom Globalno usklađenog ispitnog postupka za laka vozila (WLTP), novog i realnijeg ispitnog postupka za mjerenje potrošnje goriva i emisija CO₂. Od 1. rujna 2018. godine WLTP je potpuno zamijenio ispitni postupak Novi europski vozni ciklus (NEDC). Vrijednosti potrošnje goriva i emisija CO₂ izmjerene WLTP ispitnim postupkom često su više od vrijednosti izmjerenih NEDC ispitnim postupkom, jer su ispitni uvjeti sličniji stvarnim.

Ciljevi smanjenja emisija CO₂ koje su proizvođači automobila morali ispuniti do 2021. godine, temeljili su se na starom NEDC ispitnom postupku. Od uvođenja novog WLTP ispitnog postupka u rujnu 2017., vrijednosti CO₂ dobivene WLTP ispitnim postupkom prevedene su na NEDC ekvivalentne vrijednosti (tzv. korelirane NEDC vrijednosti) kako bi se mogle pratiti usklađenosti s ciljevima smanjenja emisija CO₂ koje je postavila Europska unija. Ove korelirane NEDC vrijednosti vrijedile su još 2020. godine, a od 1. siječnja 2021. godine i ciljevi smanjenja emisija su u potpunosti usklađeni s WLTP ispitnim postupkom.

Zbog gore navedenoga, za sva nova vozila navedene su vrijednosti potrošnje goriva i specifičnih emisija CO₂ dobivene WLTP ispitnim postupkom.

Iznimno, posebno su označena asteriskom (*) starija nova osobna vozila gdje su navedeni stari podaci dobiveni starim NEDC ispitnim postupkom.
